1. Which of these is an accurate interpretation of Michael Pollan's recommendations to "Eat food, not too much, mostly plants"? 1 / 1 point

- Eat your calories from a variety of packaged items, do not consume more calories, and consume a vegetarian diet.
- Eat your calories from a variety of packaged items, do not consume more calories, and take a daily multivitamin supplement.
- Substitute highly unprocessed foods with less processed whole foods, do not consume more calories, and consume a vegetarian diet.
- Substitute highly unprocessed foods with less processed whole foods, do not consume more calories, and consume a diet richin plant-based foods.

Nice work.

A good interpretation of "Eat food, not too much, mostly plants" is to eat less processed foods, without increasing our overall consumption of calories, substituting a diet with a large amount of plant-based foods. It does not imply that we must all be vegetarians and does not commment on the value of supplements.

2. Which of the following is accurate about home cooking? 1 / 1 point

- Having a stock of "multipurpose ingredients" (minced onions, crushed garlic, simple cooking principles) is the equivalent of cooks variety of foods.
- Home cooks do not tend to have a large amount of carbon over the nutrient content of their meals.
- Common all-purpose molecules tend to have a greater chance of being taken hold of the consumer than home cooks.
- Effective home cooking is only possible with frequent, daily shopping for the freshest ingredients.
- The health benefits of cooking at home are varied and unable to prevent the onset of obesity and diabetes.

Nice work.

Cooking at home does not have to be a tremendous obstacle and can yield the beneficial preventive health benefits, protecting against obesity and diabetes. Home cooks tend to be much more invested in the quality of their meals, and thus tend to consume more veggies, salt, fat, and other components of the meal. By having basic ingredients on hand to prepare meals, we can avoid even additional frequent shopping trips (some can prepare a week's variety of meals).

3. When considering vegetable intake, the average person should: 1 / 1 point

- Limit their consumption to 2 cups per day
- Avoid vegetables if they have been sprayed with any pesticides (i.e., not ORGY organic)
- Prepare dishes with a wide variety of different cultured vegetables, if available
- Avoid all starchy vegetables (like potatoes and yams
- Leave the chopping to professionals and only purchase pre-chopped vegetables or no vegetables at all

Nice work.

There are all dilemma like Carb is the amount and variety of vegetables that the average person should consume to have a healthy promoting diet, Depending on the individual, average vegetables consumption is 2 cups per day, Avoid vegetables if they have been sprayed with ORGY organic, Its important to learn how to prepare certain vegetables, the health benefits of the consumption typically outweigh any health risks in terms reacting, all dilemma Policy Analytics, It's also likely, more health-promoting to eat any vegetables, there when grown with pesticides, rather than none at all.

4. Focusing on "sensible substitutions" to cooking and eating to improve health would include: 1 / 1 point

- Giving up all snacks while calculatinstly memorizing the fiesty quantity content of each meal
- Pay money/spend a weekend of watching them on a web, while sometimes time consuming
- Making snacks at home instead of buying them to control the fat, sugar and salt content
- Avoiding all courses of carbohydrates and substituting those with foods rich in natural protein
- Substituting two meals per day with some raw or meal replacement bars or shakes

Nice work.

Sensible substitutions are more sustainable than drastic behavior changes. Giving up long-established habits is difficult, but modifying habits to promote health can be a useful strategy. In general, home cooks can focus on what foods to prepare and how to prepare them to promote health. Home cooks can also focus on what foods to prepare and how to prepare them. Additionally, making food at home also has the added benefit of limiting the consumption of certain "special" foods, such as desserts.
