
Module Quiz: Contributing Factors II
Graded Assignment • 30 min

Due Sep 15, 11:59 PM IST

Your grade: 90%

Your latest: **90%** • Your highest: **90%** • To pass you need at least 80%. We keep your highest score.

1. **Which of the following statements best describes Aaron Beck's cognitive triad in action?** 1 / 1 point

○ I failed because I didn't put in the effort to prepare. I resolve to not make the same mistake again.
● I'm such a burden to others. I doubt others will want to work with me on future projects. I give up.
○ The project failed because my teammates didn't do their part. I'll have to join a more engaged team.
○ These failures are not my fault. They made it difficult for me to succeed and they set me up to fail.

✓ Nice work

According to Beck, people who are depressed have negative core beliefs about the future, their experiences with others, and their own abilities. Broadly speaking, their response to negative events focuses inward or themselves. Failures are their own fault, their failure causes others to shun them, and their identity is marked with failure. These three components affect one another.

2. **Which of the following scenarios and subsequent response best describes a cognitive distortion?** 1 / 1 point

○ When a doctor gives a poor prognosis: "I'm not sure I fully agree. I'd like a second opinion."
○ When your team loses a game: "The team lost because the other team was more skilled than ours."
○ After getting rejected by somebody: "Since dating is a game of numbers I should keep trying even after getting rejected."
● When your supervisor requests an unscheduled one-on-one meeting: "I think I'm going to get fired."

✓ Nice work

Unlike most rational thought, cognitive distortions tend to provoke negative feelings. Moreover, cognitive distortions are not grounded in reality.

3. **Which of the following statements best describes hopelessness?** 0 / 1 point

○ "It's my fault that the directors didn't like our proposal. I'm not a good team member, I'll only mess up future proposals."
○ "All I can think about are my mistakes during the presentation. I can still recall the exact moment I stumbled over my words."
○ "Our proposal didn't get accepted. The senior managers are mean and have done this to almost every team. Maybe it's time to talk to the directors instead."
● "All my proposals have been rejected. I'm not sure what's wrong and feel like quitting."

Try again

4. **How does childhood sexual abuse affect the risk of developing bipolar disorder?** 1 / 1 point

○ Does not affect the risk
○ Mitigates the risk
○ Decreases the risk
● Increases the risk

✓ Nice work

There is strong evidence suggesting that stressful life events play a role in bipolar disorder. For example, there is a strong link between childhood trauma and subsequent development of bipolar disorder.

5. **Which of the following is considered an ACE (adverse childhood experience)?** 1 / 1 point

● Parental divorce or separation
○ Restricted screen time
○ Time out as a form of punishment
○ Strict household rules for bedtime

✓ Nice work

Adverse childhood events are often separated into two categories: child abuse and neglect, and household challenges. Household challenges include exposure to the mother being treated violently, parental divorce or separation, parental incarceration, a household member with substance abuse problems, and a household member with mental illness.

6. **Childhood trauma is consistently linked to** 1 / 1 point

● an earlier age of onset of bipolar disorder.
○ more rapid cycling in bipolar disorder.
○ a later age of onset of bipolar disorder.
○ more long-lasting episodes of depression in bipolar disorder.

✓ Nice work

Researchers have found that childhood trauma is consistently linked to an earlier age of onset of bipolar disorder, increased risk of suicide attempts, and cooccurring substance misuse.

7. **LGBTQ individuals may experience distress based on their minority status, which can in turn increase the risk of depression due to hopelessness/pessimism, rumination, and** 1 / 1 point

○ anger.
● social isolation.
○ neuroticism.
○ identity exploration.

✓ Nice work

Clinical psychologist Mark Hatzenbuehler (2009) proposed a model in which stigma-related stress (such as that experienced by LGBTQ individuals) leads to negative mental health outcomes (e.g., increased depression, anxiety, substance use) through three processes: rumination, social isolation, and hopelessness/pessimism.

8. **Out of the five forms of material hardship, including lack of medical care, free food, phone turned off, unstable housing, and problems paying bills,** 1 / 1 point

○ only unstable housing is linked with an increased risk of depression.
○ only experiencing a lack of medical care and free food are linked with an increased risk of depression.
○ none have been linked with an increased risk of depression.
● all five have been linked with an increased risk of depression.

✓ Nice work

According to research with adults in the United States, all five forms of material hardship were linked with an increased risk of depression.

9. **Which of the following is true based on research with stress and depression?** 1 / 1 point

● Not everyone who is exposed to stressful life events develops depression.
○ Depression does not cause stress.
○ Everyone who experiences stressful life events develops depression.
○ Stress is not a contributing factor to depression.

✓ Nice work

The relationship between stress and depression is complicated for two reasons because: 1) not everyone who is exposed to stressful life events develops depression, and 2) just as stress leads to depression, the relationship is reciprocal with depression leading to stress.

10. **Research on the impact of multiple underrepresented social identities on outcomes of interest, such as depression is known as** 1 / 1 point

○ stress research.
○ ACE research.
● intersectionality research.
○ racism research.

✓ Nice work

Intersectionality examines the impact of multiple underrepresented social identities (e.g., involving race, sexual orientation, gender) present in one individual on outcomes of interest, such as depression.
