Your grade: 100%

You have **100%** (+ 0 for Bonus) **60/60** — To pass you need at least 60% We keep your highest score.

Next time

1. **Appetite and weight are controlled by:** 1 / 1 point
 - a complex overlapping system that integrates the needfor nutrients and calories with reward from food,
 - the quality and quantity of nutrients in each meal,
 - a part of the brain called the hypothalamus that processes our internal needfor energy with memories of the and ability to efficient move internal environment,
 - All of the above.

 Nice work.

2. **Regaining weight after weight loss is due to lack of willpower.** 1 / 1 point
 - True
 - False

 Nice work.

3. **Which of the following is false about how the body compensates in response to calling both or calorie to lose weight?** 1 / 1 point
 - Appetite hormones increase hunger and lower satiety.
 - Metabolism slows down to burn fewer calories.
 - The body adjusts by lowering set point.
 - The body acts like it is starving and subconsciously fights be & to regain weight.

 Nice work.

4. **Carbohydrate reward us through the same dopamine systems in the brain that is activated by sex and gambling.** 1 / 1 point
 - True
 - False

 Nice work.

5. **The emotional satisfaction we get from certain foods can even be helpful and cause us to overeat.** 1 / 1 point
 - True
 - False

 Nice work.

6. **Which of the following is true about weight set point?** 1 / 1 point
 - It is tightly controlled to maintain a specific weight or amount of body fat.
 - It can shift up or down depending on genetic and environmental factors.
 - It varies from person to person.
 - All of the above.

 Nice work.

7. **The main cause of obesity is genetic and not of our control.** 1 / 1 point
 - True
 - False

 Nice work.

8. **Which of the following is false about genes and obesity?** 1 / 1 point
 - Genetic testing can determine which weight loss approach works best for each person.
 - Each gene makes only a tiny difference in our weight.
 - The combination of genes we inherit affects our susceptibility to obesity.
 - Obesity genes primarily act on the brain to affect each person's experience of food and ostensibly my appetite and weight-regulating hormones.

 Nice work.

9. **Obesity is not one disease,there are many different types of obesity.** 1 / 1 point
 - True
 - False

 Nice work.

10. **The most successful weight loss interventions is different for me % person.** 1 / 1 point
 - True
 - False

 Nice work.
