'Weight Management: Beyond Balancing Calories'

Today's goal: 12 items

Module 1
Understanding Obesity

Module 2
Managing Obesity: The Role of Diet

Completion Workbook
Module 2
Reading • 15 min

Prepared Foods & Whole Foods
Meal Hacked Food Intersects Fat Biology
Video • 4 min
Processed Foods & Diet
Reading • 10 min
The Art of Quick Homemade Lunches • 4 min

Increasing Your Nutrition
Vegetables and Macronutrients
Reading • 10 min
Weight Loss Dietitians Is There a Best Diet?
Video • 4 min
Portion and Whole Foods
Reading • 10 min

Just Be Thought
Self Practice
Practice Assignment • Graded • 100%
Thinking About Your Current Diet
Practice Assignment • Ungraded • 0 min
Managing Meal Time: Fundamental
Practice Peer Review

Module 3
Nourishment: The Role of Fibers, Exercise, & Sleep

Completion Workbook
Module 3
Reading • 10 min

Fibers
Fibers, Hormones, & Emotional Eating
Video • 4 min
Fiber
Reading • 10 min
Practice Exercise
Practice with application • 4 min

Exercise
Exercise Physical Activity: Powering Your Weight Goal
Video • 4 min
Exercise
Reading • 10 min

Sleep
Sleep Hormones & Appetite
Video • 4 min
Sleep
Reading • 10 min

Practice Assignment
Self Practice
Practice Assignment • 10 min
Managing Stress, Exercise, & Sleep
Peer-graded Assignment • 0 min
Managing Stress, Exercise, & Sleep
Practice Peer Review

Module 4
Long Habit & Emotions to Your Advantage

Module 5
Creating a Weight Loss Plan & Big-Picture Approach

Sleep

0:04 / 4:03

Here are other helpful resources based on information from the previous lecture.

- [Sleep & Weight Management Matter, How Much Sleep Is Best](#)
- [Sleeping Tablets Associated with Increased Mortality](#)
- [What Should I Know About Sleep Disorders](#)

Tips for good sleep

- Maintain consistent bedtime and wake times even days, weekends, even after a "bad" night.
- Stay in bed for a period equal to the combination of hours of sleep you normally get per night + sleep inefficiency (period for hours not asleep) + sleep latency. For example, if you usually get 7 hours of sleep and it takes you 30 minutes to fall asleep, then you should stay in bed for 7.5 hours.
- If you haven't fallen asleep within 20 minutes, get out of bed and do something relaxing and not exciting, like reading, but not housework, TV, work, or anything that is too stimulating during a period of wakefulness. Return to bed when sleepy.
- Avoid daytime naps. For some people, naps will interfere with falling asleep at night.
- Don't drink alcohol within the hours of bedtime; alcohol is a poor sleep aid and causes nighttime awakenings.
- Avoid caffeine (coffee, tea, soda, chocolate) after 1pm or since caffeine delays or weakens sleep.
- Don't go to bed too either on an empty stomach or a full stomach. A light snack may help.
- Bedrooms should be quiet, safe, and relaxing. Clocks should face away from the bed, as worse to "check the time" during the night.
- Daily exercise will improve insomnia, although the effects may not be immediate.
- Consider "worry time" method in the day to consider and resolve the day's problems before getting into bed.
