1. Which of the following is NOT a function of the endoplasmic reticulum (ER)? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The endoplasmic reticulum (ER) is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The ER is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the ER is to synthesize and fold proteins.

2. Which of the following is NOT a function of the Golgi apparatus? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The Golgi apparatus is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The Golgi apparatus is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the Golgi apparatus is to synthesize and fold proteins.

3. Which of the following is NOT a function of the mitochondrion? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The mitochondrion is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The mitochondrion is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the mitochondrion is to synthesize and fold proteins.

4. Which of the following is NOT a function of the lysosome? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The lysosome is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The lysosome is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the lysosome is to synthesize and fold proteins.

5. Which of the following is NOT a function of the peroxisome? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The peroxisome is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The peroxisome is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the peroxisome is to synthesize and fold proteins.

6. Which of the following is NOT a function of the vacuole? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The vacuole is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The vacuole is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the vacuole is to synthesize and fold proteins.

7. Which of the following is NOT a function of the nucleus? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The nucleus is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The nucleus is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the nucleus is to synthesize and fold proteins.

8. Which of the following is NOT a function of the cytoplasm? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The cytoplasm is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The cytoplasm is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the cytoplasm is to synthesize and fold proteins.

9. Which of the following is NOT a function of the cell membrane? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The cell membrane is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The cell membrane is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the cell membrane is to synthesize and fold proteins.

10. Which of the following is NOT a function of the cell wall? (1 point)

☐ Protein synthesis and folding

☐ Lipid synthesis

☐ Detoxification

☐ Storage of calcium ions

Correct answer: Storage of calcium ions

The cell wall is a large organelle in eukaryotic cells. It is involved in protein synthesis, lipid synthesis, and detoxification. The cell wall is also involved in the storage of calcium ions, but this is not its primary function. The primary function of the cell wall is to synthesize and fold proteins.
