Instructions

1. **As the number of adverse childhood experiences reported by an individual increases, their likelihood of experiencing a mood disorder** 1 / 1 point

   ○ remains constant.
   ○ cannot be predicted.
   ● increases.
   ○ decreases.

   ✓ Nice work

   Researchers typically find that as the number of adverse childhood experiences a person experiences increases, so too, does the likelihood of their experiencing depressive symptoms in adulthood.

2. **Poverty is considered** 1 / 1 point

   ● a chronic stressor.
   ○ a mild stressor.
   ○ a biological stressor.
   ○ a temporary (acute) stressor.

   ✓ Nice work

   Poverty is a chronic stressor that affects individuals world-wide. Based on research in the United States, Colleen Heflin and John Iceland (2009) found that all five forms of material hardship, including lack of medical care, free food, phone turned off, unstable housing, and problems paying bills, were linked with an increased risk of depression.

3. **When individuals experience racism and racial discrimination,** 1 / 1 point

   ○ they are more likely to experience resilience.
   ○ they are only more at risk for experiencing depression if they are a woman.
   ● they are more at risk for experiencing depression.
   ○ they are less at risk for experiencing depression.

   ✓ Nice work

   Research has found a significant association between racial discrimination and depression for both men and women.

4. **Which of the components of childhood trauma is linked with bipolar disorder?** 1 / 1 point

   ○ Only physical abuse
   ● All subcomponents (emotional, physical, and sexual abuse)
   ○ Only sexual abuse
   ○ Only emotional abuse

   ✓ Nice work

   Review of research on the role of childhood trauma in bipolar disorder. They concluded that all subcomponents of childhood trauma (emotional, physical, and sexual abuse) are strongly linked with bipolar disorder, yet there is continued debate on the role of each trauma subtype.

5. **Research on intersectionality indicates that which individuals are more at risk for depression?** 1 / 1 point

   ● Individuals with multiple underrepresented social identities.
   ○ Individuals who have struggles in multiple domains, such as personal, work, and social.
   ○ Individuals with one underrepresented social identity.
   ○ Individuals who experience at least two other mental health disorders.

   ✓ Nice work

   Multiple studies on intersectionality with adults and adolescents indicate that individuals with multiple underrepresented social identities are more at risk for depression.
