Anxiety and Related Disorders ✕

Today's goal • 3/3 items

Module 1
Learn With PsycLearn Essentials

Module 2
Introduction to Psychological Disorders

Module 3
Opening to Anxiety Disorders

Module 4
Components of Anxiety

Components of Anxiety
- ✓ Pause and Reflect: An Angry Dog
  Practice Assignment • Grade: 100%
- ✓ Diverse Manifestations of Anxiety Disorders
  Reading • 3 min
- ✓ Manifestations of Intense Anxiety
  Video • 2 min
- ✓ Check Your Understanding: Components of Anxiety
  Practice Assignment • Grade: 100%

Autonomic Nervous System
- ✓ Components of the Human Nervous System
  Video • 3 min
- ✓ Organs and Internal Systems Involved in Anxiety
  Video • 2 min
- ✓ Going Up the Sky Tower
  Video • 2 min
- ✓ The Components of the Autonomic Nervous System
  Reading • 1 min
- ✓ Check Your Understanding: Autonomic Nervous System
  Practice Assignment • Grade: 100%
- ✓ Activity: Components of Anxiety
  Practice Assignment • Grade: 100%

Key Takeaways
- ○ Key Takeaways: Components of Anxiety
  Reading • 10 min

Module 4 Quiz
- ○ Module Quiz: Components of Anxiety
  Graded Assignment • 10 min

Module 5
Disorders that Involve Anxiety Part 1

Module 6
Disorders that Involve Anxiety Part 2

Module 7
Conclusion

Module 8
Cumulative Quiz

Module 9

Module 10
PsycLearn Essentials APA Student Resources

Key Takeaways: Components of Anxiety

0:05 / 2:15 1x

This section of the course focused on helping you to be able to:

Learning objective: List the four components of anxiety.

1. Anxiety can produce both psychological and physiological consequences..
   - Cognitive consequences of anxiety include constant worrying, difficulty concentrating and problem-solving, and overthinking.
   - Stressful situations elicit emotions such as anxiety and fear. Anxiety and fear may manifest as feeling tense and uneasy, apprehensive and scared, or distressed and terrified, depending on how dangerous the situation is. These emotional responses might also be characterized as a feeling of dread.
   - Anxiety can also have behavioral manifestations. These include restlessness, sleep disturbances, and avoidance of anxiety-producing situations.
2. Anxiety and fear produce the same physiological response, known as the fight-or-flight response. The **fight-or-flight response** is a pattern of physiological changes elicited by activity of the sympathetic nervous system in response to threatening or otherwise stressful situations that leads to mobilization of energy for physical activity.
3. Stressful situations trigger a range of behaviors, most of which can be categorized either as efforts to deal with the stressor (that is, fight) or attempts to escape the stressor (that is, flight).

Learning objective: Describe the components of the autonomic nervous system.

1. The **autonomic nervous system** (ANS) controls involuntary movements and regulates body organs.
2. The ANS also has two components, the sympathetic nervous system and the parasympathetic nervous system.
   - The **sympathetic nervous system (SNS)** functions like an alarm system, triggering the fight-or-flight response.
   - Once the stress has passed, the **parasympathetic nervous system (PNS)** takes over, calming and reversing the bodily changes triggered by the SNS when the body was on high alert. The PNS evokes a rest-and-digest response that focuses the body on long-term maintenance.

Now that you've finished reviewing these key takeaways, you can go back and look over the material from this module or move on to take the Module Quiz. Remember to use the information you just learned when you study for the quiz. Good luck!
