Depressive and Bipolar Disorders ✕

Today's goal • 3/3 items

Module 1
Learn With PsycLearn Essentials

Module 2
Opening to Depressive and Bipolar Disorders

Lesson 1: Culture and Mood Disorders

- ✓ Focus of the Course
  Reading • 2 min
- ✓ Classifying Psychopathology
  Reading • 4 min
- ✓ Culture and Psychopathology
  Reading • 4 min
- ✓ Culture and Intersectionality
  Reading • 4 min
- ✓ Culture and Stigma
  Reading • 4 min
- ✓ Check Your Understanding: Culture and Mood Disorders
  Practice Assignment • Grade: 100%

Lesson 2: Introduction to Depressive and Bipolar Disorders

- ✓ Depressive and Bipolar Disorders
  Video • 6 min
- ✓ Living with a Mood Disorder: A Case Study
  Reading • 10 min
- ✓ Overview of Depressive and Bipolar Disorders
  Reading • 10 min
- ✓ Check Your Understanding: Introduction to Depressive and Bipolar Disorders
  Practice Assignment • Grade: 80%

Key Takeaways

- ○ Key Takeaways: Opening to Depressive and Bipolar Disorders
  Reading • 10 min

Module 2 Quiz

- ○ Module Quiz: Opening to Depressive and Bipolar Disorders
  Graded Assignment • 10 min

Module 3
Depressive and Bipolar Disorders

Module 4
Biological Contributing Factors

Module 5
Psychological Contributing Factors

Module 6
Treatments for Depressive and Bipolar Disorders

Module 7
Suicide

Module 8
Conclusion

Module 9
Cumulative Quiz

Module 10
Course Resources

Module 11
PsycLearn Essentials APA Student Resources

Key Takeaways: Opening to Depressive and Bipolar Disorders

0:11 / 3:57 1x

Learning Objectives

This module focused on helping you to be able to:

- Explain cultural influences on treatment for mood disorders.
  - Discuss how culture influences mental health.
- Compare and contrast common mood disorders.
  - Recognize symptoms for various mood disorders

Learning objective: Discuss how culture influences mental health.

1. **Culture** is the distinctive customs, values, beliefs, knowledge, art, and language of a society or a community that are the basis for everyday behaviors and practices, passed on from generation to generation, sometimes overtly but often implicitly.
2. The prevalence rates, symptoms, and expression of a psychological disorder vary across cultures as do diagnostic trends, treatment protocols, and likelihood of a successful recovery.
3. **Intersectionality** refers to this overlap of multiple identities in a way that affects an individual's experiences, privilege, and mental health.
4. Culture is not a single monolithic variable. That is, the culture in which individuals live interacts with their own individual demographic characteristics (e.g., country of origin, race, religion, and gender) to create subcultures with unique values, norms, and expectations.
5. Researchers have found differences in psychopathology across the world. Some cultures may describe mental health symptoms in moral (e.g., guilt or worth), social (e.g., relationship conflicts), hedonistic (e.g., reduced pleasure seeking), or even spiritual (e.g., messages in dreams) terms.
6. **Stigma** is the negative social attitude attached to a characteristic of an individual that may be regarded as a mental, physical, or social deficiency.
7. Mental health stigma contributes to negative stereotypes and prejudices that are impediments to timely care and effective treatment, which can lead to alienation and decrease the quality of life for those suffering.
8. Although viewed differently in different cultures, the consequence of stigma can lead to alienation, isolation, poor mental health treatment, and perpetuation of misinformation. Countering stigmas surrounding mental health issues can lead to more responsive access and appropriate diagnosis.
9. Some of the differences in expression of a disorder are based on people's responses to societal expectations and some of the diagnostic and treatment differences result from biases on the part of clinicians (Causadias & Cicchetti, 2018).

Learning objective: Summarize the characteristics of depressive disorders.

1. All types of depressive disorders involve sad mood, maladaptive cognitions (such as no one likes me, I am a failure), and physiological changes (such as fatigue, change in appetite, weakened immune response).
2. Although each of the depressive disorders share three symptoms, they can be distinguished based on length or severity of symptoms, specificity of the cause of the depressive symptoms, and uniqueness of the symptoms not shared by another depressive disorder.
3. Depressive disorders can occur without an environmental trigger or result from substance/medication use or be brought on by another medical condition.

Learning objective: Summarize the characteristics of bipolar disorders.

1. Bipolar disorders are a group of disorders where symptoms of depression and mania or hypomania typically alternate, although one episode of mania is enough for a diagnosis of bipolar I disorder.
2. Bipolar I disorder involves alternating episodes of depression and mania or hypomania; bipolar II disorder involves fluctuations between depression and hypomania; cyclothymic disorder involves depressive and manic symptoms that do not reach the level of a depressive disorder, and hypomania lasting at least two years.
3. People with one of the bipolar disorders may experience fewer potential years of life due to higher rates of suicide and cardiovascular disease.
