Coordinating Narratives, Challenging the Status Quo

While photography has been used by left governments and movements since the 1930s, photography can also be used for the opposite: constructing a conservative status quo. Since the beginning of the century, photography has been used to construct a narrative of progress, modernity, and development, and to challenge the status quo and the society that shapes our culture. Photography can be used to construct an understanding of the role of individuals in society, to show historical narratives as current social issues and concerns.

As often happens with photography and with other technologies or media, the status quo has been challenged by the adoption of the print form. But through photography and, to a lesser extent, images can also be used to understand the status quo. Contemporary artists, however, often use the photograph to question photography, narrative and *cultural* identity. Images that are used to construct a narrative of progress, modernity, and development, to show historical narratives as current social issues and concerns, to challenge the status quo and the society that shapes our culture. Photography can be used to construct an understanding of the role of individuals in society, to show historical narratives as current social issues and concerns.

Learning Objectives

- Collage the new photographs have been useful to dig out understanding of various and the world around.
- Understood how which have to contextualized images to feelings accepted history.
- Analyze how culture and presentation of photographs influence the way we understand historical situations and current cultural issues and events.
